| 1.0 | 27-Oct-2024 | Initial version with system requirements. |
| 2.0 | 25-Dec-2024 | Second version specification are defined. |

1 Introduction

1.1 Abstract

The FreshMart Inventory System is a supermarket-style inventory management system designed for businesses to track stock levels, manage suppliers, view sales trends, and generate automatic reordering notifications when stock is low. The system provides features such as user registration, an admin dashboard, stock tracking, supplier management, reordering alerts, and inventory reports.

1.2 Similar Systems

There are existing supermarket-style inventory management systems that offer similar functionalities, such as Talabat, and insta shop. These systems allow businesses to manage inventory, process sales, and track customer data. However, FreshMart focuses on stock level tracking with real-time supplier integration and automatic reordering tailored for smaller-scale supermarkets.

1.3 Business Context

FreshMart Inventory System supports businesses in managing their stock and suppliers, ensuring they can efficiently monitor product availability and optimize their supply chain with minimal manual intervention.

2 System Overview

2.1 Problem Statement

Supermarkets require a reliable method to track stock levels, manage supplier relationships, and automatically reorder items when stock levels reach a critical low. Existing manual processes result in frequent errors and inefficiencies, potentially leading to stockouts or overstocking, which can impact profitability and customer satisfaction.

2.2 System Scope

FreshMart will include features such as user authentication, an admin dashboard, stock tracking, supplier management, reordering alerts, and sales and inventory reporting. These tools will ensure smooth stock flow and better decision-making.

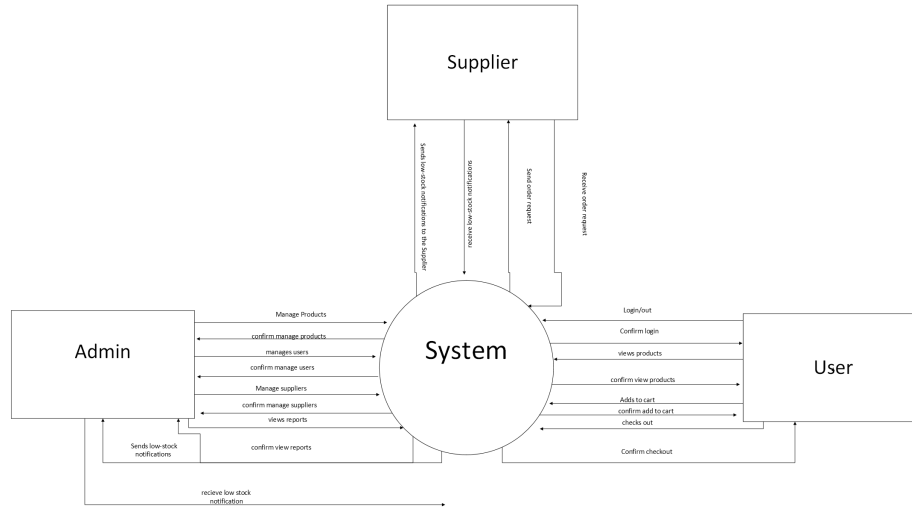

Figure 1: Context Diagram

3 Functional Requirements

3.1 System Functions

The system will consist of the following key features:

- **User Registration & Authentication:** Business users can register and log in to manage inventory. Multi-user access with role-based permissions (e.g., admin, stock manager).
- **Admin Dashboard:** Admins can view all business activities, including stock levels and sales trends. Generate comprehensive reports on stock and sales data.
- **Stock Management:** Track stock levels in real-time. Maintain logs of incoming and outgoing products.
- **Supplier Management:** Add and manage suppliers, storing contact information and product supply details. Set up payment terms with each supplier.
- **Automatic Reordering Notifications:** Set stock threshold limits. Trigger reorder notifications when stock reaches a specified low level.
- **Sales and Inventory Reports:** Generate detailed reports on inventory trends and sales performance. Provide low-stock alerts and sales analysis to optimize supply chain management.
- **Search & Filter:** Allow users to search products by name or filter based on stock levels, suppliers, etc.

• 4 Detailed Functional Specification

4.1 User Registration & Authentication

Purpose:

This module enables business users to create accounts, log in, and access system features based on role-based permissions (e.g., admin, stock manager).

Features:

- **Registration Process:** Users must provide their name, email, and password to create an account.
- **Authentication:** Secure login with username/email and password.
- **Role-Based Access Control:**
 - * **Admin Role:** Full access to all system features, including reports, user management, and supplier management.

4.2 Stock Management

Purpose:

To monitor and manage stock levels .

Features:

- **Real-Time Stock Tracking:** Display available stock levels for all products.
- **Categorization:** Products categorized by type (e.g., food, beverages).
- **Low-Stock Alerts:** Notifications triggered when stock falls below a predefined number.

4.3 Supplier Management

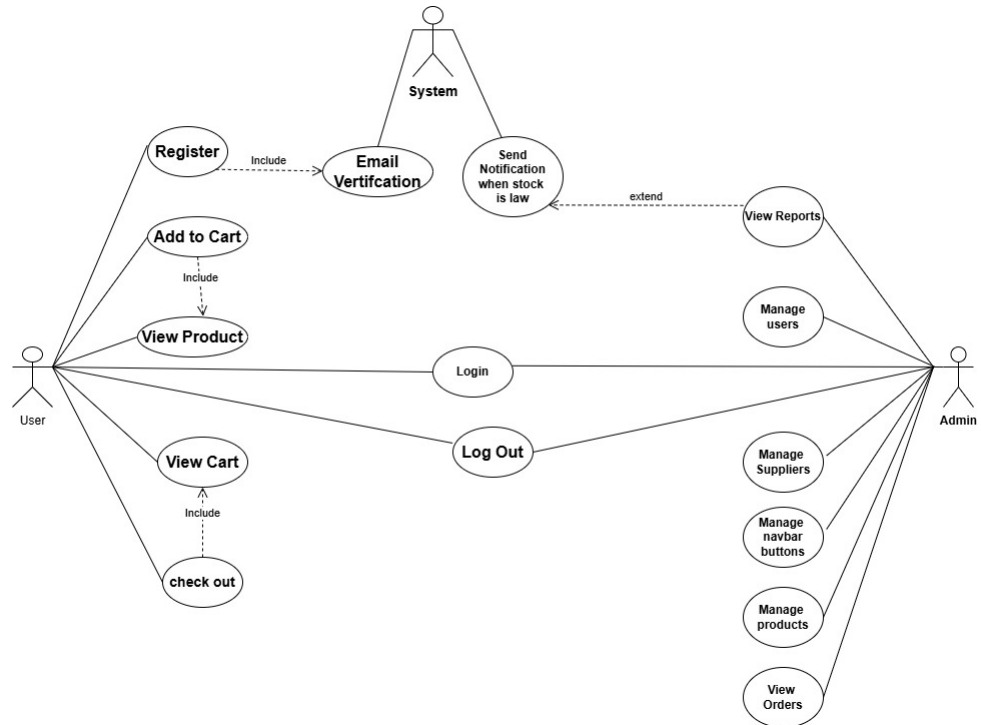

Purpose:

To efficiently manage suppliers.

Features:

- **Supplier Communication:** Automates notifications to suppliers for low-stock items.
- **Supplier Performance Tracking:** Generate reports on supplier sales

4.4 Use case diagram

• Use Case Tables

Register

| | |
|--------------------|--|
| Actor | User |
| Description | Allow a new user to create an account. |
| Data | User details (name, email, password) |
| Stimulus | User submits registration details. |
| Response | Account is created. |
| Comments | Includes email verification to ensure that it's written correctly. |

Email Verification

| | |
|--------------------|---|
| Actor | System |
| Description | Email verification to ensure that it's written correctly. |
| Data | User email |
| Stimulus | Triggered by user registration. |
| Response | Account is created. |
| Comments | Mandatory step for account registration. |

Add to Cart

| | |
|--------------------|---|
| Actor | User |
| Description | Enables a user to add a product to their shopping cart. |
| Data | Product details |
| Stimulus | User clicks "Add to Cart" for a specific product. |
| Response | Product added to the user's cart. |
| Comments | The user can add, remove, or update the quantity of products. |

View Product

| | |
|--------------------|--|
| Actor | User |
| Description | Allows users to browse and view product details. |
| Data | Product information |
| Stimulus | User wants to view details. |
| Response | Product details displayed. |
| Comments | Provides detailed descriptions and images of products. |

View Cart

| | |
|--------------------|--|
| Actor | User |
| Description | Enables a user to review items added to their shopping cart. |
| Data | Cart items |
| Stimulus | User clicks on the "View Cart" option. |
| Response | Displays all items currently in the cart. |
| Comments | Includes item quantity and price details. |

Check Out

| | |
|--------------------|--|
| Actor | User |
| Description | Facilitates the completion of a purchase of items in the cart. |
| Data | Cart items, payment details |
| Stimulus | User proceeds to checkout. |
| Response | Order is confirmed, and payment processed. |
| Comments | Includes validating payment. |

Login

| | |
|--------------------|--|
| Actor | User/Admin |
| Description | Allows users or admins to access their accounts. |
| Data | Username and password |
| Stimulus | User enters their data. |
| Response | User is logged in and directed to the dashboard. |
| Comments | Required for accessing the website. |

Log Out

| | |
|--------------------|--|
| Actor | User/Admin |
| Description | Logs the user or admin out of their account. |
| Data | Session details |
| Stimulus | User clicks "Log Out." |
| Response | Session is terminated. |
| Comments | Required for logging out from the website. |

Send Notification When Stock is Low

| | |
|--------------------|---|
| Actor | System |
| Description | Sends notifications to the admin when stock levels are low. |
| Data | Stock levels, product details |
| Stimulus | Stock reaches a certain number. |
| Response | Notification sent to the admin. |
| Comments | Extends the functionality of "View Reports." |

View Reports

| | |
|--------------------|--|
| Actor | Admin |
| Description | Allows the admin to view detailed reports. |
| Data | Sales data and stock of products |
| Stimulus | Admin selects "View Reports." |
| Response | Report is displayed. |
| Comments | Includes sales data and stock of products. |

Manage Users

| | |
|--------------------|---|
| Actor | Admin |
| Description | Enables the admin to manage user accounts. |
| Data | User account details |
| Stimulus | Admin selects "Manage Users." |
| Response | User accounts are added, updated, or deleted. |
| Comments | Includes user details. |

Manage Suppliers

| | |
|--------------------|--|
| Actor | Admin |
| Description | Allows the admin to manage supplier information. |
| Data | Supplier details |
| Stimulus | Admin selects "Manage Suppliers." |
| Response | Supplier details are added, updated, or deleted. |
| Comments | Maintains updated supplier information. |

Manage Navbar Buttons

| | |
|--------------------|--|
| Actor | Admin |
| Description | Enables the admin to customize navigation buttons on the web-site. |
| Data | Navigation details |
| Stimulus | Admin selects "Manage Navbar Buttons." |
| Response | Navbar is updated. |
| Comments | Facilitates better navigation. |

Manage Products

| | |
|--------------------|---|
| Actor | Admin |
| Description | Allows the admin to add, update, or delete product details. |
| Data | Product information |
| Stimulus | Admin selects "Manage Products." |
| Response | Product information is updated. |
| Comments | When the admin adds a product, they can include an image, description, and price. |

View Orders

| | |
|--------------------|--|
| Actor | Admin |
| Description | Enables the admin to view and manage all orders placed by users. |
| Data | Order details |
| Stimulus | Admin selects "View Orders." |
| Response | Displays all user orders. |
| Comments | Includes order details. |

5 Non-functional Requirements

- **Usability:** The user interface must be intuitive and accessible.
- **Security:** The system will ensure data protection via encryption and role-based access control.
- **Performance:** The system should handle up to 10,000 products without lagging.
- **Scalability:** The system should support multiple business branches and users.
- **Reliability:** It should have 99.9% uptime to ensure continuous operation.
- **Maintainability:** The system should allow easy upgrades for future features.

6 Data Design

The FreshMart Inventory System will include a robust database for tracking products, stock levels, suppliers, users, and sales trends. The database schema will consist of tables for products, suppliers, transactions, and user accounts. Relationships between tables will ensure that admins can track product movements and supplier activities in real-time.
